**Building an evidence base for active ageing policies: Active Ageing Index and its potential
INTERNATIONAL SEMINAR
Brussels, 16–17 April 2015**

Definitions

WHO (2002): “Active ageing is the process of optimizing opportunities for health, participation and security in order to enhance quality of life as people age”.

The Active Ageing index (AAI) is a composite index that aggregates different dimensions of well-being of the elderly:

- Employment

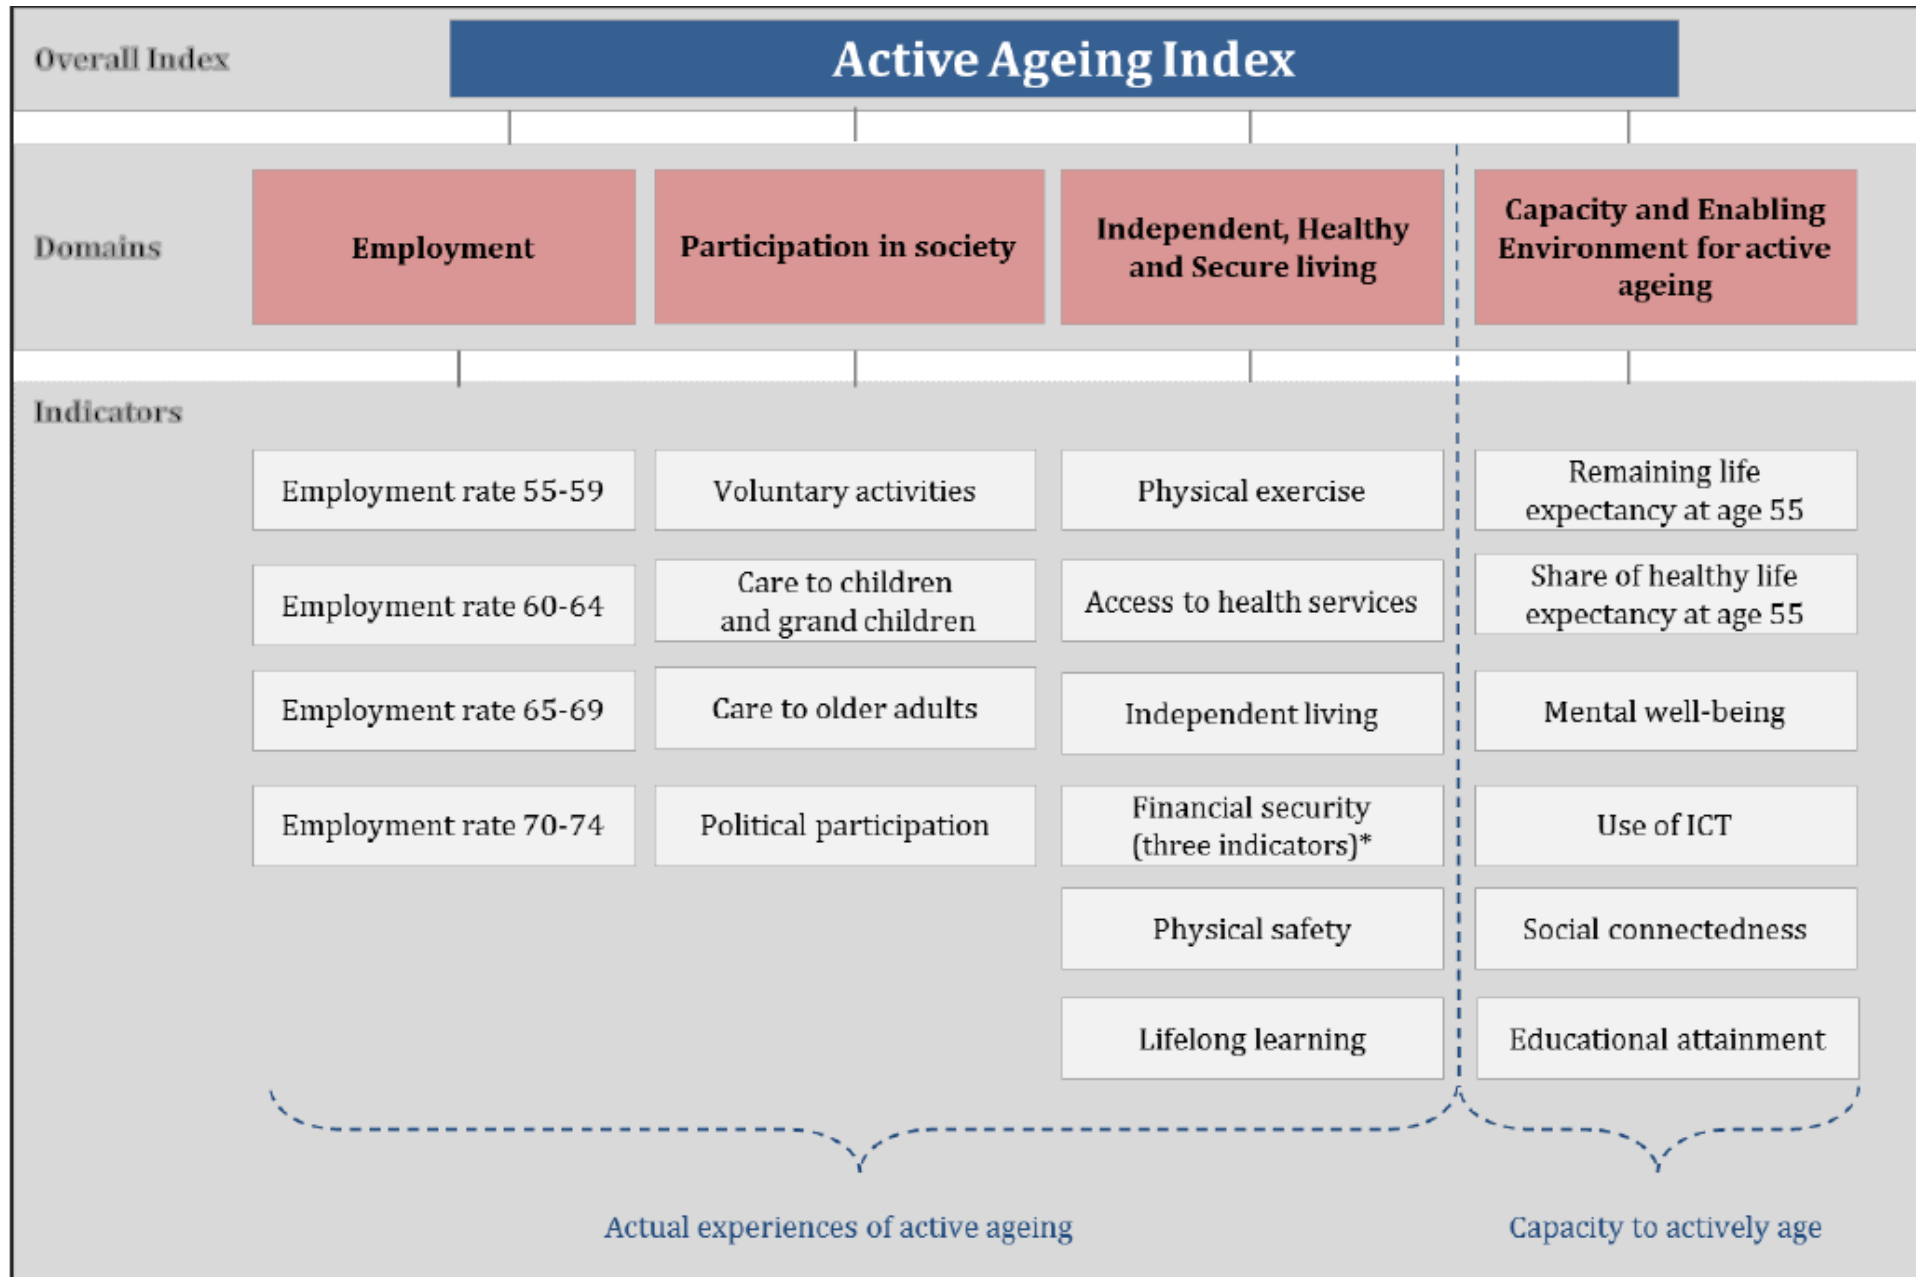

- Participation in society

- Independent, healthy and secure living

- Capacity and enabling environment for active ageing

Computed for each country of EU-28. Data year: 2012. Last version is Dec-14

Domains and indicators of the AAI

Domains and indicators of the AAI

Domain	Indicator	Age group	Weight indicator	Weight domain	Data source	Adjustments
1. Employment	1.1 Employment rate 55-59	55-59	0.25	0.35	LFS, 2012	SILC-rev1, 2012 used
	1.2 Employment rate 60-64	60-64	0.25		LFS, 2012	Idem
	1.3 Employment rate 65-69	65-69	0.25		LFS, 2012	Idem
	1.4 Employment rate 70-74	70-74	0.25		LFS, 2012	Idem
2. Participation in society	2.1 Voluntary activities	55+	0.25	0.35	EQLS, 2012	
	2.2 Care to older children, grandchildren	55+	0.25		EQLS, 2012	
	2.3 Care to older adults	55+	0.3		EQLS, 2012	
	2.4 Political participation	55+	0.2		EQLS, 2012	
3. Independent, healthy and secure living	3.1 Physical exercise	55+	0.10	0.10	EQLS, 2012	
	3.2 Access to health and dental care	55+	0.20		SILC-rev1, 2012	
	3.3 Independent living arrangements	75+	0.20		SILC-rev1, 2012	
	3.4 Relative median income of 65+ relative to those aged below 65	65+	0.10		SILC-rev1, 2012	Relative median income of each cohort relative to those aged 25-54
	3.5 No poverty risk for older persons	65+	0.10		SILC-rev1, 2012	Done for each cohort
	3.6 No severe material deprivation rate	65+	0.10		SILC-rev1, 2012	Done for each cohort
	3.7 Physical safety	55+	0.10		ESS, 2012	
	3.8 Lifelong learning	55-74	0.10		LFS, 2012	Eurostat [trng_lfs_01]
4. Capacity and enabling environment for active ageing	4.1 Remaining life expectancy at age 55	55	0.33	0.20	EHLEIS, 2010	Eurostat 2012 [demo_mlexpec]
	4.2 Share of healthy life expectancy at age 65	55	0.23		EHLEIS, 2010	Eurostat 2012 [hlth_hlye]
	4.3 Mental well-being	55+	0.17		EQLS, 2012	
	4.4 Use of information and communications technology (ICT)	55-74	0.07		Eurostat, ICT Survey, 2012	
	4.5 Social connectedness	55+	0.13		EES, 2012	
	4.6 Educational attainment	55-74	0.07		LFS, 2012	SILC-rev1, 2012 used

Details of indicators of the AAI

2) Participation in society

- 2.1 Voluntary activities: percentage of population aged 55+ providing unpaid voluntary work through the organisations (EQLS 2011)
- 2.2 Care to children, grandchildren: Percentage of population aged 55+ providing care to their children and/or grandchildren (at least once a week) (EQLS 2011)
- 2.3 Care to older adults: Percentage of population aged 55+ providing care to elderly or disabled relatives (at least once a week) (EQLS 2011)
- 2.4 Political participation: Percentage of population aged 55+ taking part in the activities of a trade union, a political party or political action group (EQLS 2011)

3) Independent, healthy and secure living

- 3.1 Physical exercise: percentage of population aged 55+ who engage in physical activity and sport at least five times a week (Eurobarometer Special edition 334/2010)
- 3.2 Access to health and dental care: percentage of population aged 55+ who report no unmet need for medical and dental examination (SILC 2010)
- 3.3 Independent living arrangements: percentage of persons aged 75 and older living in single or couple households (SILC 2010)
- 3.4 Relative median income: ratio of the median equivalised disposable income of people aged 65+ to the median equivalised disposable income of those aged below 65 (SILC 2010)
- 3.5 No poverty risk for older persons: percentage of people aged 65+ who are not at the risk of poverty using 50% of the national median equivalised disposable income as the poverty threshold (SILC 2010)
- 3.6 No severe material deprivation for older persons: percentage of people aged 65+ not severely materially deprived (SILC 2010)
- 3.7 Physical safety: percentage of population aged 55+ who are not worried about becoming a victim of violent crime (ESS 2010)
- 3.8 Lifelong learning: percentage of older persons aged 55-74 who received education or training in the 4 weeks preceding the survey (EU-LFS 2011).

4) Capacity and enabling environment for active and healthy ageing

- 4.1 Remaining life expectancy achievement of 50 years at age 55, using EHLEIS
- 4.3 Share of healthy life years in the remaining life expectancy at age 55, using EHLEIS
- 4.3 Mental well-being (for older population aged 55+, using EQLS 2011 and using WHO's ICD-10 measurement)
- 4.4 Use of ICT by older persons aged 55-74 at least once a week (including everyday), using Eurostat ICT Survey
- 4.5 Social connectedness: Percentage of older population aged 55+ who meet friends, relatives or colleagues at least once a month, using ESS 2010 / 2008 (for LV and RO) / 2006 (for AT) / 2004 (for LU) / 2002 (for IT)
- 4.6 Educational attainment of older persons: Percentage of older persons aged 55-74 with upper secondary or tertiary educational attainment (EU-LFS 2010)

Replication of the AAI

Replicate the index for synthetic cohorts formed by:

5 Age groups (55-59, 60-64, 65-64, 70-74 and 75+)

2 Sex

28 Countries (EU-28)

Total = $5 \times 2 \times 28 = 280$ observations

Same official methodology with some adjustments (improvements?)

Graph and econometric analysis of AAI by cohorts, sex and countries

Analysis of predictors of AAI at the country level (macro variables) and the role of the welfare state types on favouring AAI.

Concluding remarks

- There are significant differences in the Active Ageing Index among cohorts of elderly.
- Computing the AAI for distinctive groups can contribute to detect areas of active ageing where some groups of elderly are lacking and promote an adequate policy response.
- Wealth, equity and favourable pension characteristics of the country are important predictors for a better active ageing.
- It is worrying to observe a systematic female disadvantage in old age wellbeing.
- The results show that the Social-Democratic regime (Nordic countries), with its strong redistributive policies, is the most favourable for active ageing.
- Analysing the effects of welfare regimes on active ageing can be an important task for future research and improve our understanding of the relationship between policies and outcomes in old age.
