

GSBPM

What is GSBPM?

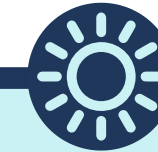

GSBPM is a generic process model for production of official statistics. It consists of 8 phases and 44 sub-processes.

More than 40 NSOs and international statistical organizations are using GSBPM

GSBPM is a living model that evolves to reflect changing business landscape. The latest version came out in 2019

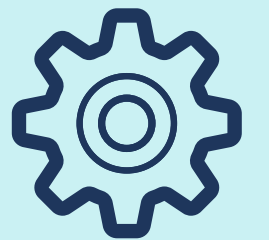

How does GSBPM help statistical organizations?

Provides a structure for documentation of statistical processes

Facilitates sharing statistical methods and software

Provides a framework for quality assessment

Helps to measure operational cost and system performance
