7.2 Produce dissemination products

This sub-process produces the dissemination products, as previously designed in sub-process 2.1 (Design outputs), to meet user needs. They could include printed publications, press releases and websites. The products can take many forms including interactive graphics, tables, maps, public-use microdata sets, linked open data and downloadable files.

Typical steps include:
- Preparing the product components (explanatory texts, tables, charts, maps, quality statements etc.)
- Assembling the components into products
- Editing the products and checking that they meet publication standards.

Quality Indicators:
- Ratio of statistical products that are disseminated with quality statements/quality report
- The rate of available statistics. The indicator is the ratio of the number output data elements provided in accordance to a relevant regulation to those required by the regulation
- The extent to which all statistics that are needed are available
- Percentage of ESS to which "statistical outputs/products" meets users' needs
- Description of users and their respective needs with respect to the statistical data
- The extent to which relevant metadata is linked to output data

For details, see Quality Indicators for GSEPM (version 2.0)
