Generic Statistical Information Model (GSIM): Specification (Version 1.0, December 2012)

About this document

This is aimed at metadata specialists, information architects and solutions architects. This document includes descriptions of information in a statistical organization. There are also a number of annexes, which include information about the the GSIM extension methodology, links and influences of existing standards, a glossary and UML class diagrams.

Table of Contents

I. Introduction

II. Information in a statistical organization

- A. Introduction
- B. Business Group
- C. Production Group
- D. Concepts Group
- E. Structures Group
- F. Base Group

Annex A. Extending the model

- A. GSIM Extension Methodology
- B. Administrative Attributes

Annex B. Influence of existing standards

- A. Introduction
- B. Generic Statistical Business Process Model (GSBPM)
- C. Data Documentation Initiative (DDI)
- D. Statistical Data and Metadata eXchange (SDMX)
- E. ISO/IEC 11179
- F. ISO 704
- G. Neuchâtel Terminology for Classifications
- H. Business Process Model and Notation (BPMN)

I. COmmon Reference Environment (CORE)
J. The Open Group Architectural Framework (TOGAF)
Annex C Glossary

Annex C. Glossary

Annex D. UML class diagrams and object descriptions

Base Group
Business Group
Concepts Group
Production Group
Structures Group
