GSIM and DDI working together

GSIM's conceptual model and DDI's model of implementation standards for CSIS

The overall conceptual model of the statistical production process is the GSIM model. It is a reference framework of internationally agreed definitions, attributes and relationships that describe the pieces of information that are used in the production of official statistics (information objects). This model is designed to support the implementation of the DDI model of implementation standards for CSIS. The overall conceptual model of the statistical production process is the GSIM model.
