This space contains all the links and information relevant to the UNECE Harmonized Survey Module for Poverty Measurement. The module has been designed to provide a model set of survey questions for poverty measurement in countries of Eastern Europe, Caucasus and Central Asia with the objective to strengthening statistical capacity for producing comparable and reliable poverty indicators for monitoring of the sustainable development.

The module has been developed by UNECE thanks to the funding from the project “Harmonized poverty indicators for monitoring sustainable development in CIS countries”. Additional financial support was received from the United Nations Development Account (9th tranche) project “Promoting equality” and United Nations Development Account (10th tranche) project “Statistics and data.”
