<td>Referential Metadata Subject</td>
<td>Structures</td>
<td>Identifies the subject of an organized collection of referential metadata.</td>
<td>The Referential Metadata Subject identifies the subject of the metadata that can be reported using this Referential Metadata Structure. These subjects may be any GSIM object type, or any Data Point or set of Data Points created from a specific Data Structure. Examples: The GSIM object type may be Product for which there is a list specified in a Value Domain. The Value Domain specifies the list of actual Products for which reference metadata can be reported or authored using this Referential Metadata Structure.</td>
