Issue #89: Error - Annex 3: LIM Glossary

The contents of the Annex 3: LIM Glossary are not identical to the contents in Sparx EA.

There was a manual processing error by the creator who did not have access to the Sparx EA files at the time.

The Sparx EA files should be considered to be the master/authoritative source and the Word/html versions simply as slaves/copies.

The worst error is the definition and explanatory text for Component Relationship. This is totally wrong. It was copy and paste from the GSIM definition and explanatory text for Attribute Component.

A correct definition and explanatory text should be sought. For this particular object there is no help in the Sparx EA files. Both the definition and explanatory text are blank.
