5.8 Finalise data files

This sub-process brings together the results of the other sub-processes in this phase in a data file (usually micro-data), which is used as the input to the “Analysis” phase. Sometimes this may be an intermediate rather than a final file, particularly for business processes where there is strong time pressure, and a requirement to produce both preliminary and final estimates.

Quality Indicator:
- Delay between expected and actual finalized data file

For details, see Quality Indicators for GSBPM (version 2.0)
