Survey module for measuring violence against women

The survey module (last modified 23 May 2011)

Guidance for interviewers and training

- Facilitator's manual (23 May 2011)
- Interviewer's manual (23 May 2011)
- Interviewer training slides (23 May 2011)
- Question-by-question description of the survey, QxQ description (23 May 2011)

Supervision of interviewers

- Supervisor form (15 Sep 2011)

Materials for data processing

- Codebook and table shells (23 May 2011)

Violence indicators are computed with the aid of these computer code files.

- Syntaxes 1 (12 Apr 2013)
- Syntaxes 2 (12 Apr 2013)

Collecting feedback and evaluating

- Questions for debriefing (11 Nov 2010) has been produced.
- Outline of feedback report (11 Nov 2010) has been produced.

Conclusions and recommendations from pilot tests

- Recommendations

Background

UNECE has developed and tested this survey module on violence against women, as part of its activities in the United Nations Development Account project "Enhancing capacities to eradicate violence against women through networking of local knowledge communities". The aim of the module is to enable countries to collect a minimum set of information to measure the prevalence of physical, sexual and intimate partner violence contained in the Report of the Friends of the Chair of the United Nations Statistical Commission on Indicators on Violence against Women (see para 8).

The proposed questionnaire and methodology were discussed at two UNECE Expert Group Meetings on Measuring Violence against Women in 2009 and 2010, respectively. The module has been tested in Armenia, Georgia, Mexico, the Republic of Moldova and South Africa. See Recommendations.
