4 Collect

Collect

4.1 Create frame and select sample
4.2 Set up collection
4.3 Run collection
4.4 Finalise collection

References and Guidelines

G SIM Objects

Collect

This phase collects or gathers all necessary information (e.g., data, metadata and paradata), using different collection models (e.g., acquisition, collection, extraction, transfer), and loads them into the appropriate environment for further processing. Whilst it can include validation of data set formats, it does not include any transformations of the data themselves, as these are all done in the "Process" phase. For statistical outputs produced regularly, this phase occurs in each iteration.
