Publish SDMX Artefacts in Production

This phase consists of these main steps:

1. Ensure that all issues are fixed with the SDMX artefacts in the technical pilot registry. If so then;

2. Ensure that all of the SDMX artefacts' "Description" fields are filled and aligned with information in the "Implementation and usage guidelines";

3. Copy the SDMX artefacts from the technical pilot registry to the production registry and finalise the artefacts to make them ready for use. Ensure that the versioning of the artefacts conforms to the SDMX versioning guidelines.

This phase is complete when the project's SDMX artefacts are final and available for use by reporters and consumers in the chosen production SDMX registry.
