

Good practices on climate change-related statistics

Welcome to the platform for sharing good practices on climate-change related statistics!

See the case examples below! For further information or to submit contributions, please contact [support.stat \[at\] unece.org](mailto:support.stat@unece.org).

The grouping of case examples goes according to the Recommendations on climate change-related statistics :	
1 - Improving data for greenhouse gas emission inventories	
1)	Improving data for emission inventories
2)	Enhancing collaboration nationally for inventories
3)	Creating a dialogue between statistical and climate communities
2- Improving utility of climate change-related statistics	
4)	Providing easier access
5)	Improving usefulness of statistics
6)	Developing new statistics
3 - Developing the statistical infrastructure	
7)	Improving existing classifications
8)	Building knowledge through partnerships
9)	Organizing the work on climate change-related statistics
