Global Forum for Geography and Statistics Home

We, the participants in the task force for the Global Forum for Geography and Statistics (GFGS), agree to join forces to establish a global network on geography and statistics.

We agree upon that both national statistical institutes (NSIs), national mapping agencies (NMAs) and Research and Development Institutions (RDIs) should be invited to a professional, common and global network. Cooperation is formalised as Memorandum of Understanding and Letter of Intent from Ciesin and JRC respectively.

This is a space for GFGS members to share ideas, resources, experiments and results
