This phase logically takes place at the end of the project, but relies on inputs gathered throughout the different phases. It includes evaluating the success of the implementation, drawing on a range of quantitative and qualitative inputs, and identifying and prioritising potential improvements.

This phase is made-up of three sub-processes, which are generally sequential, but which can overlap to some extent in practice. These sub-processes are:

- Conduct Project Evaluation
- Document Lessons Learned
- Give Feedback to SDMX Working Groups / secretariat
