

UNECE Guidelines for the Modelling of Statistical Data and Metadata

Name and version: UNECE Guidelines for the Modelling of Statistical Data and Metadata
(United Nations and Economic Commission for Europe, Conference of European Statisticians, Methodological Material)

Alternative name: Guidelines for the Modelling of Statistical Data and Metadata

Valid: From September 1995

Description: The aim of these guidelines is to help national statistical organisations to design metainformation systems for statistical survey processing. They recommend ways of metadata and data modelling for individual phases of the processing of statistical surveys.

Intended use: The guidelines are intended for national statistical organisations and other national and international bodies disseminating statistics. The target audience is subject-matter statisticians, statistical metadata system designers and IT experts.

Maintenance organization: The body responsible for maintaining this methodological material is the UNECE Statistical Division.

ISO Standard Number: not applicable
