

Issue #60: Consistency of GSIM Levels

(Feedback Statistics New Zealand; 28 September, 2017)

There are currently some inconsistencies in the levels of detail in GSIM. Classifications is really detailed - down to quite logical level, whereas the business process is very conceptual (although this has been fleshed out with the LIM). GSIM s/b extended to incorporate conceptual and logical. The LIM has expanded some of the less detailed areas within GSIM and should be incorporated into GSIM - ie GSIM s/b extended to incorporate the Logical Level - it already does in some places. It is recommended that the LIM is utilised to expand GSIM inbetween 5 yearly reviews.
