

Enterprise Architect file

- [GSIM 1.2.EAP](#) : this file is for users who want to fully explore the UML model (produced by Sparx EA v14.1.1429). You need to have the Enterprise Architect program installed to use this file.

** Extracting from the EA file*

It is possible to get an XMI extract from the EA file. The link below contains a transform that will help you to produce any kind of reporting on the model. It can also run consistency checks on the model.

You have to reference your own XSLT (2.0) engine and XMI file to run in : see the ant.properties file.
