

# Gross Domestic Product

Concept	Gross domestic product -
Definition	Gross domestic product (GDP) is an aggregate measure of production equal to the sum of the gross values added of all resident institutional units engaged in production (plus any taxes, and minus any subsidies, on products not included in the value of their outputs). It can also be defined as the sum of the final uses of goods and services (all uses including exports but excluding intermediate consumption) measured in purchasers' prices, less the value of imports of goods and services, or the sum of primary incomes distributed by resident producer units. GDP at market prices as measured by production, expenditure and income sides has to be identical.
